Comparing the Past Decade's Design Revenue

(in \$ billions) Source: McGraw-Hill Construction Research & Analytics/ENR.

FOR THE FIRST TIME IN OVER THREE YEARS, THE CONSTRUCTION industry is seeing signs that the deep industry recession has bottomed out and the market is turning around. But among large design firms, no one is ready to pop any corks to celebrate. However, most firms believe the recovery will be a long, slow climb with some bumps along the way.

The results can be seen in ENR's Top 500 Design Firms list. The Top 500, taken as a group, had overall design revenue of \$79.8 billion in 2010, down 0.2% from 2009's \$80 billion and 11.9% from 2008's high-water mark of \$90.6 billion. Not surprisingly, the domestic U.S. market was hit harder for the Top 500 than the international market. Design revenue for projects in the U.S. for the Top 500 fell 2.3% to \$57.86 billion in 2010 from \$59.22 billion in 2009. Revenue from projects outside the U.S. rose in 2010 to \$21.96 billion, up 5.6% from \$20.80 billion in 2009. However, domestic revenue dropped 15.1% over the two-year period from 2008 to 2010, while international design revenue fell 2.1% during the same time period for the Top 500.

There is a general feeling among the Top 500 firms that the markets will recover over the next 12 months. The ENR online survey contained a series of market-related questions, including whether survey participants believed prospects for the U.S. construction

"Yes, we have been pressed, but there are some really good signs in the market for the next 24 months."

John Dionisio, CEO, AECOM

market would improve over the next 12 months. Of the 418 firms on the Top 500 that answered this question, 58.9% said the market would improve. Only 6% believed it would continue to decline, while 35.2% thought the market would stay the same.

"I don't think anyone believes that we are out of the recession yet," says Brad Perkins, CEO of Perkins Eastman. "We are looking a 'bathtub' curve of a recovery. We are out of the drain, but we will have a long, gradual rise before we hit a significant upward slope," says Craig Martin, CEO of Jacobs.

Dick Fox, CEO of CDM adds, "I think it is going to take two years for the market to come all the way back. I don't think recovery will come this year, but there will be slow increases in the market."

John Cryer, principal at PageSoutherlandPage, says he is seeing more private-sector requests for qualifications but was surprised at how quickly federal-sector bids shut down as the debate in Congress over budget cuts heated up. "This time, I think the private sector will lead us out of the recession."

John Dionisio, CEO of AECOM, says firms have learned to work smarter and will be better prepared when the market turns around. "Yes, we have all been pressed, but there are some really good signs in the market for the next 12 months," Dionisio says. He did not elaborate on what those signs are.

Market Analysis

“That the economy seems to be on a steady course toward sustained growth is a cause for optimism, but not exuberance,” says Kathleen McGinty, senior vice president of Weston Solutions. She expects weak growth in the short term.

For most, if not all, the firms on the list, the biggest concern is project funding in the public sector. “No one has money, and no one has a good way to get money, so the public sector is going to be problematic in the near term,” says Jacobs’ Martin. Only those segments within the public sector that have revenue streams attached through such sources as tolls or rate-payers will remain steady to strong, he says.

Some firms say a pause in new projects hasn’t stopped public agencies from preparing for a turnaround in funding. “Utilities are continuing planning activity,” says Dan McCarthy, president of Black & Veatch’s global water group. “Even in California, where activity is down by half, agencies are engaged in long-term planning. They know they can’t ramp up programs quickly, so they want to be prepared when funding does become available.”

Who Owns Them Now?

One of the biggest trends in the design profession is consolidation among firms. This year, 12 firms from the 2010 Top 500 were acquired or absorbed into their

457

Top 500 firms sent surveys in last year.

57.1%

Saw revenue declines between 2009 and 2010.

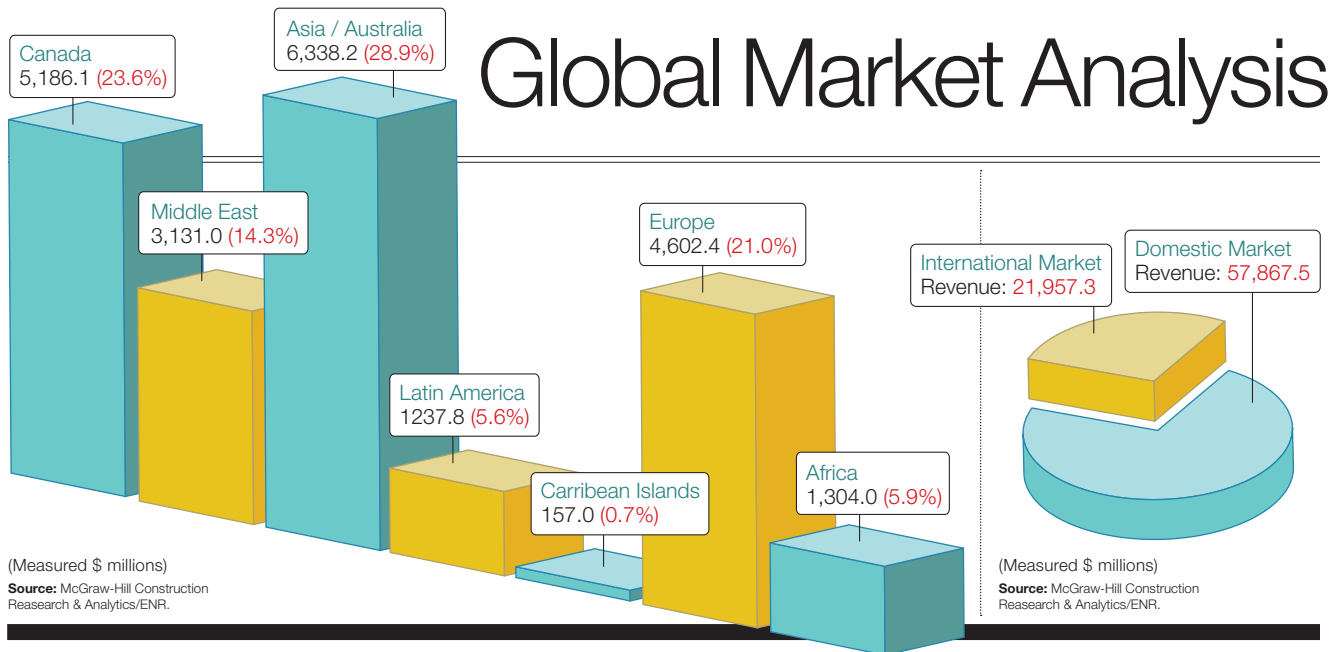

parent companies. And two firms on this year’s Top 500 already have been acquired this year.

Among the larger deals was Jacobs’ \$675-million purchase of the mining and metals operations of Norway’s Aker Solutions. Mining and metals is a very robust market, and the acquisition is squarely in the firm’s sweet spot, says Martin. He says the acquisition puts Jacobs at the top end of that market, along with Fluor and Bechtel.

Martin says many design firms have a lot of cash but few places to invest it other than through acquisitions. “Acquisition prices have finally come down from previous highs, with multiples now back down to single digits,” Martin states. He says Jacobs is looking for deals in upstream oil and gas markets as well as the right opportunities in power markets.

Canada’s Stantec is one of the most active companies in acquisitions in the U.S. In 2010, it bought three firms from last year’s Top 500 Design Firms list: No. 85, Burt Hill, Philadelphia, for \$36 million; No. 318, WilsonMiller, Naples, Fla., and No. 485, ECO:Logic, Rocklin, Calif. And this year, it has acquired Anshen+Allen Architects, which is No. 284 on this year’s list. “I believe we have achieved critical mass in the U.S., with nearly 5,000 staff to go [and] 6,000 in Canada,” says Stantec CEO Robert Gomes.

Gomes says acquisitions were difficult in 2008 and

2009 because it was tough to value firms in a down market based solely on expectations. Also, many firms had unrealistic estimates of their own value in a recessionary market. “As it turned out, we made no acquisitions in the first half of 2010 but 10 in the second half,” he says.

Stantec believes in the strength of its own brand. “While there is value in brand names of acquired firms, we are acquiring talent, not just a name,” says Gomes. That is why it rebrands the firms it acquires under the Stantec name. “We realize that it is difficult for some firms, but we try to provide the people of the acquired firms with greater resources to match greater challenges,” he says. Seven of the Stantec’s 11 senior vice presidents are from acquired firms.

Another Canadian designer that made a splash in the U.S. in 2010 was exp Global, which changed its name from Trow Global on April 4. The firm acquired Teng Affiliated Cos., Chicago, which ranked No. 157 on last year’s Top 500, and X-nth, Maitland, Fla., which ranked No. 198. “We had been in the pipeline and oil sectors in the U.S., but two years ago we redirected the company to be more global in a broad variety of sectors,” says Rob Petrov, senior vice president of exp Global. “We are now a full-service firm in the U.S.”

Defense contractor SAIC has made a major move into the construction design market. In the past three years, SAIC has acquired Oklahoma City-based Benham Group and Denver-based R.W. Beck. “We are one of the few major defense firms that have moved into the construction market through acquisition,” says J.T. Grumski, senior vice president of SAIC. He says that SAIC is continuing to look to add new firms but not to build size. “We are looking for

Game Changer | By Gary J. Tulacz

Public-Parsons Partnership

Many design firms in infrastructure markets are seeking alternative financing sources for projects. Parsons Corp. is taking the next step by creating a new group, Parsons Enterprises, to help create alternative financing plans and, in the right cases, invest in the projects themselves.

“The joke has been that you would go to conferences on alternative financing and discuss the same three projects over and over,” says Ruth McMorrow, new executive vice president at Parsons. McMorrow helped arrange public-private deals on civil works as an investment banker at Scotia Capital, Toronto.

“It will be our job to assist clients

in determining whether a particular project lends itself to alternative financing and provide them options on how to proceed,” McMorrow says. “We provide clients options, and they decide what is best for them.”

But Parsons is not simply willing to advise clients. “We proceed on the assumption that we may be an equity partner in the project,” McMorrow says. Parsons has worked on several P3 projects, including Autoroute 25 in Montreal (see above). McMorrow says that she already is reviewing 12 projects from other units of Parsons that may be equity financing candidates in the transportation and water sectors. ■

specific expertise in enduring markets, such as energy and technology.”

Buying Markets

Many firms are looking to acquire firms so they can expand in their strongest markets. One of the biggest was CDM's acquisition of Wilbur Smith Associates, a deal that was announced on Feb. 25. WSA is ranked No. 70 on this year's Top 500. "This has moved us into the water market and transportation," says Fox.

Another firm getting into new market sectors is CDI Engineering Solutions, which last year purchased L. Robert Kimball & Associates, Ebensburg, Pa. Kimball was ranked No. 155 on last year's Top 500. This move gives the firm new capabilities in the infrastructure market, says Bob Giorgio, CDI's president. Kimball's capabilities let CDI to play in the general infrastructure markets as well as allow it to provide added infrastructure support to its industrial customers, both in the U.S. and abroad, he adds.

But not all design firms are looking to grow through acquisition. HNTB topped the \$1 billion mark in 2010 by just \$60,000, but the company did it through organic growth. The milestone was a long time coming, says Paul Yarossi, president of HNTB Holdings. "We have not made a major acquisition in the past 10 years."

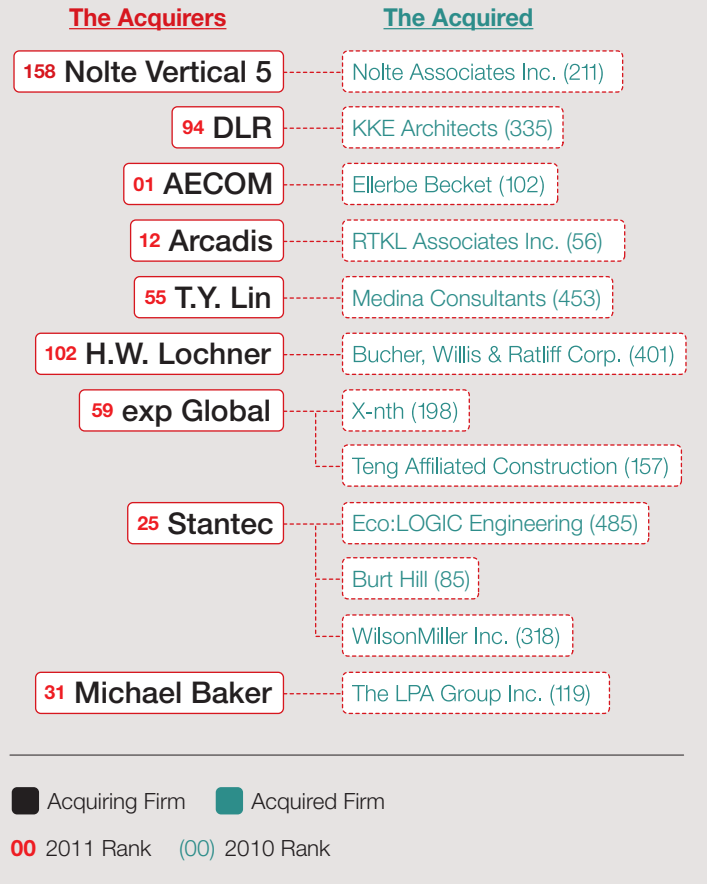

The move toward consolidation has put many mid-size firms on the defensive. However, some midsize firms say expertise is more important than size. "Firms like AECOM are huge compared to us, but their bridge division is no bigger than ours," says Mike Britt, vice president of Modjeski and Masters Inc. "I have never had a client ask me how big we are. They are more concerned about whether we can provide them with a highly skilled team on-site," says Craig Goehring, CEO, Brown and Caldwell. He adds that consolidation also has removed a few competitors that have been absorbed into larger firms.

The recession has taken its toll on design firms, but relatively few have failed. This is because most major firms have paid attention to their bottom lines, despite pressures to maintain the top line. "We have been more selective in selecting projects," says Carl Roehling, CEO of SmithGroup. "We don't want to pursue work just for the sake of volume."

For exp Global, growth is a matter of flexibility. "You have to have a growth scheme where people can move from one market to another to take advantage of opportunities," says Ivan Dvorak, executive vice president of U.S. operations for exp Global. However, he says business development is a constant challenge. "It is like mowing the grass. You let it go for one week and things start looking bad," says Dvorak.

Who Bought Whom...

Firms from last year's Top 500 that were recently acquired

On the Web

For expanded content on the Top 500 List see enr.com/toplists.

Many design firms are expanding their array of services. For example, AECOM acquired Tishman Construction last summer for \$245 million. "We always thought of ourselves as pure designers, but everything is changing, and we found we needed to get into the construction side," says AECOM's Dionisio. He notes that AECOM has no plans to do any self-perform construction and will stick to the construction management side. He says the Tishman acquisition allows AECOM to bring both construction and design perspectives to a client.

SSOE is another firm that is exploring new services. "For the past two years, SSOE has a new focus on construction and program management," says Vince DiPofi, senior vice president of the SSOE Group. He says the firm now can provide clients a full range of project services, including construction and program management as well as planning and design. "It is now

ENR: Do you see any existing or new technologies that are helping change the design process?

BRAD PERKINS, CEO
PERKINS EASTMAN
New York, N.Y.

"When you have a small professional team at an international location, it takes a sophisticated communication capability to support them. It is hard to imagine how you can work internationally without BIM and Web-based technology."

ENR: What do you think about the trend toward industry consolidation?

VINCE DIPOFI,
SENIOR VICE PRESIDENT
SSOE
Toledo, Ohio

"The problem is there is a lack of succession planning. The retiring baby boom generation is leaving many firms without a solid succession plan in place. Since there isn't viable succession, the best option is to sell."

CARL ROEHLING, CEO
SMITHGROUP
Detroit, Mich.

"The industry is grinding ahead with BIM, but we are not at the point where we can plug in all the elements of design, costs and construction into a model. We are not even close to design-on-the-fly yet."

CHRIS VINCZE, CEO
TRC COS. INC.
Lowell, Mass.

"Consolidation is inevitable as globalization becomes a bigger factor in the industry. Now we are seeing an invasion of foreign players in the industry. Unfortunately, this means regional players are getting squeezed."

IVAN DVORAK, EXECUTIVE VICE
PRESIDENT OF U.S. OPERATIONS
EXP GLOBAL
Chicago, Ill.

"We do not hire technicians anymore because the young professionals coming out of schools now can handle the technology themselves and work it faster. I am amazed how they can provide so many alternative solutions."

KEITH WARTA, PRESIDENT
BARLETT & WEST INC.
Topeka, Kan.

"Success in our industry has always been based on one-to-one relationships. We believe that effectively establishing and maintaining those relationships is what is most important, not the size of the company."

FRANK CODISPOTI, PRESIDENT
SAIC-BENHAM CONSTRUCTORS
McLean, Va.

"The world is definitely getting quicker. We have a new generation of engineers who are growing up on Twitter and Facebook and are beginning to show those of us in the non-Twitter generation how to better communicate."

CRAIG GOEHRING, CEO
BROWN AND CALDWELL
Walnut Creek, Calif.

"This industry is very local and highly fragmented in nature. I have never had a client ask me how big we are. They are more concerned about whether we can provide them with a highly skilled team on site."

RON GUILIANI,
SENIOR VICE PRESIDENT
SSOE
Toledo, Ohio

"We are seeing a definite trend toward facility re-use projects. Laser scanning and point cloud technology allow us to gather information about the existing structure quickly without having to conduct field studies or surveys."

GLENN BELL, CEO
SIMPSON GUMPERTZ & HEGER INC.
Waltham, Mass.

"We are not looking to acquire for size, but to add niche markets or to gain specialized skills. For example, we are looking for firms with expertise in energy markets, and in advanced building skins and materials science."

20% of our business globally."

Many firms have been able to adapt their organizations to deal with the sluggish markets. "We have been able to grow a bit in this market," says Eric Keen, executive vice president of HDR. He attributes this growth to HDR's ability to share work.

The Competition Is On

The soft market means that competition remains tough. "Some firms are taking jobs at cost or even below cost," says Dvorak. "The competition is very strong, and we are seeing some clients driving costs below what is sustainable," says Glen Bell, CEO of Simpson Gumpertz & Heger Inc. He says clients increasingly are looking for more ways to shift risk.

An executive at one large firm is more blunt. "Engineering firms continued to reduce fees for engineering services, resulting in an erosion of respect that the rest of the world has toward the profession. We have to stop hurting ourselves and sell our hours for the true value we bring to our clients. Unfortunately, engineering firms are signing up for that additional risk without additional fees to compensate for it," says the executive, who asked not to be identified.

Contractors also are taking advantage of design

"This is beginning to look like the recession of the 1970s ... inflation and spiking oil prices that caused us to struggle even after the recession ended."

John Cryer, Page-Southeastland Page

firms' competitiveness. "Contractors are seeing us as a commodity," says Dvorak. He says architects particularly are vulnerable to this competitive pressure in design-build projects. "They treat all architects as the same, except perhaps for the star-chitects." He says some designers are so desperate that they are willing to do preliminary design work on bids for free, and contractors and developers are more than willing to take advantage of that fact.

For midsize firms, teaming with contractors on design-build projects can be frustrating. "If you are working on a bid, some contractors expect you to work on 'sweat equity' in preparing the bid," says Britt of Modjeski and Masters Inc. Contractors often will tell designers to limit their pre-bid work to just basic engineering on a "least cost" design, rather than what may be the most appropriate for the project, he says.

The recent softness in the public markets has added to the competitive pressures, drawing more firms into the private sector. "With the huge decline in the federal market, I would not be surprised to see big firms in that market start moving into the private sector, where we are focused," says Chris Vincze, CEO of TRC Cos. Brown and Caldwell's Goehring admits his firm's presence in the private sector is growing. "The

private side has always been about 30% to 33% of our business, but it now has pushed above that level.”

Where Is the Money?

The general building markets have taken their lumps during the recession as developer financing dried up to a trickle. Project financing has eased a little, but not by much. “Domestic conventional financing is very conservative, with lenders looking for a lot of equity before financing a project,” says Perkins. “There is a lot of money on the sidelines from banks, insurance companies and pension funds that want to invest, but you have to show that the project makes sense.”

To go forward, building projects must show clear evidence of a return on investment. “[Clients] are looking for metrics that support their decision-making about particular project or designs. They are looking for scientific proof that the money will promote their strategic mission,” says Elizabeth Meek, principal at Sasaki Associates.

Roehling of SmithGroup agrees. “The market is getting better slowly, incrementally,” he says. However, he cautions that public-sector building work, which buoyed many firms in the general building market, may be in for a big correction, citing the current debate in

“In 2011, I project 88% of our gross revenues will originate in Asia.”

Paul Steelman,
CEO,
Paul Steelman
Associates

Congress over the deficit and the budget.

The soft market in the building sector is leading to rethinking existing facilities. “Our strongest market is in existing buildings, in adaptive re-use, renovation and rehabilitation,” says Bell. He says the building stock in many regions is so overbuilt that owners are desperately looking for new uses.

Spikes in energy prices have opened up a secondary market of energy retrofits. “Anything to do with energy efficiency is hot right now, whether it is in energy conservation on new projects or in retrofits,” says Bell, noting an increasing emphasis on the building’s skin. “That is where a lot of a building’s systems converge. This is where an integration between the designer and the contractor can provide a more integrated approach to energy savings,” he says.

However, many firms say clients are interested in results, not in appearances. “You have to be able to demonstrate that the retrofits will give a return on investment within two years to make an impact on the market,” says Dvorak.

Increasing emphasis on the provable value of sustainable design has boosted the market for green building, but it may have an impact on how sustainability is measured. “I don’t think sustainable design

has lost any momentum,” says Perkins.

But it has lost some its luster, due in part to the cost certification by the U.S. Green Building Council’s Leadership in Energy and Environmental Design standards. “LEED did a great job in setting the standards for green building, but now owners are looking at other standards to use to measure sustainability,” says Perkins.

Several designers say they are surprised to see that LEED is losing some of its appeal. “I am really surprised that there is not as much demand of LEED certification on the commercial side except for Class A buildings,” says Cryer.

“LEED and sustainability are still the price of entry for major building projects,” says Roehling. However, he says sustainable design now is moving beyond LEED and focusing on net-zero buildings. “That is the next threshold.”

Lack of Funding Takes Its Toll

During the beginning of the recession, boosts in federal and state funding for infrastructure helped soften the blow for many construction firms. But, with the budget and deficit debates in Washington and increasing budget squeezes at the state and local levels, purely

“Acquisition prices have finally come down from previous highs, with multiples now in the single digits.”

Craig Martin, Jacobs CEO

publicly funded projects may begin to dry up. “I heard that only two states are not currently dealing with deficits,” says Yarossi. That kind of atmosphere is not conducive to a robust public market.

The biggest question for infrastructure firms is whether federal funding bills will be passed. “With all the dialogue in D.C., we are afraid that the focus will be on spending only what comes in,” says Keen of HDR. “All these continuing funding resolutions have had a devastating effect on infrastructure. No one can make long-term plans, so public agencies are focusing on basic operations and maintenance,” says Giorgio.

No one seems to be willing to predict whether there will be a transportation reauthorization bill this year. Some firms are concerned whether any major funding bill will be passed this year. “I am not confident that major bills will be passed in the current political situation,” says Martin. “We as an industry have to provide a united front to make sure the funding is there to preserve our aging infrastructure,” says Yarossi.

Many firms working in the public sector worry that many public agencies tend to have an inefficient mindset. They tend to be very conservative and decide by consensus, rather than acting decisively, says one designer. The shortage of funding has many public agen-

Hot Markets | By Gary J. Tulacz

Sun, Sand and Silicon

Interest in solar power is increasing, spurred in part by international demand for alternative energy and a recent increase in the price of oil. As a result, there is more demand for the chemical vital to photovoltaic solar panels: polycrystalline silicon, or polysilicon.

Polysilicon is not a new. It serves as the base for most integrated circuits. Now, many design firms, including CDI Engineering Solutions, see demand for polysilicon growing exponentially.

“China has announced that it is committed to solar power and is supplying low-interest loans to companies willing to build silicon

plants producing at least 3,000 metric tons a year,” says Bob Giorgio, CDI’s president. China’s goal is to produce 10 GW of solar power by 2015. “We are working on polysilicon plants in China,” Giorgio says, adding that building polysilicon plants generally costs \$500 million and up. German-based Wacker Chemie AG broke ground on a \$1.5-billion polysilicon plant in Charleston, Tenn., on April 8. The plant is designed to produce 15,000 metric tons of polysilicon a year.

“I would estimate the market will grow by 20% to 30% a year for the next several years, and we plan to grow with it,” Giorgio says. ■

companies rethinking their approach to their capital assets. “We are doing a series of roundtable discussions with public utilities on economic realities, and we are finding many moving toward a more private-sector business model in planning,” says McCarthy.

Some designers are applying private-sector processes to public agencies. “We understand government agencies’ needs and show them solutions drawn from the private sector,” says McGinty. But that’s not a one-size-fits-all solution, she notes, saying, “You can’t sell a cash-strapped utility with a Fortune 500 approach.”

Alternative Financing

Thus, many designers are looking to alternative funding approaches. “The debates currently occurring in Washington, D.C., and many state capitols is not whether to build and maintain our infrastructure resources but how to fund these necessary programs,” says Tony Bartolomeo, CEO of Pennoni Associates. He says the public-private partnerships and innovative technology will have to be relied on to “do more with limited resources.”

Dionisio agrees that private financing is needed and beneficial to the building and maintenance of the nation’s infrastructure. “What most people don’t realize is that the New York City subway system and most of Los Angeles’ early infrastructure was built by private companies. We need to revisit that approach.” He says most of the resistance to private financing is political, but the recession is changing that. “You are now seeing governors and state legislatures exploring public-

private partnerships enabling legislation,” he says.

Yarossi points out that reliance on purely public funding to answer the nation’s infrastructure needs is a problem. “There has to be a recognition that there are a variety of alternative funding sources available to finance infrastructure,” he says. He notes that the deal flow has not been very high in the U.S., but he remains optimistic. “Public agencies are taking a more business-like approach to their capital programs.”

Martin agrees. “We are not seeing a breakthrough on public-private partnerships, just a few projects here and there,” he says. “Private financing is not the answer to our infrastructure need. It is just one element of the overall answer.”

On the Web

For archived Top Lists from 2003 to the present see enr.com/toplists.

Many firms have worked to help their public customers with alternative financing. For example, Parsons Corp. is in the process of setting up an alternative financing consultancy, Parsons Enterprises, which will examine its options to provide equity financing on its own toward select projects (see page 62). On April 7, it named Dean Harwood, formerly vice president, as president of the new group.

The environmental markets have felt the strain, as well. “A lot of the work we are seeing is regulatory-driven,” says Goehring, which creates its own challenges. He says wastewater technologies are scrambling to keep up with regulatory demands. “The easy stuff has already been completed. We are now in a

position of determining how to improve existing technologies and validating new technologies to meet clients' needs," he says.

Goehring thinks design firms have a new challenge: making sure the public understands the need for funding infrastructure projects in a tough economy. "Once you get beyond federally funded programs, you have to be able to make the case to the ratepayers."

Greener Pastures

The recession in the U.S. has more design firms looking abroad. One of the questions on the ENR online survey form was whether designers anticipated increasing their international presence in the next three years. Of the 426 Top 500 firms responding to this question, nearly two-thirds, or 66.0%, said yes.

Of that group seeking international growth, Asia was the destination of choice, with 165 firms, or 63.2%, saying they believed that region would be their focus. Other regions gaining attention from Top 500 firms were the Middle East (51.3%), Canada (42.1%) and Latin America (37.9%). Only 25.3% of companies said they are looking at Europe.

The interest in international work is a natural reaction to slow domestic markets. "Recessions always result in designers shifting their priorities to international work," says Perkins of Perkins Eastman. During the recession of the 1970s, for example, firms turned toward the Middle East, while in the 1980s, they looked to Europe. Then, early in this decade, attention turned to Asia, he notes. "Among international designers, if they were doing 15% of their business abroad in 2007, they are probably doing 30% now," he says.

The Middle East has continued to be strong for the most part, except for some markets. "We have seen some disruptions in the Middle East market from political unrest, but that is mostly localized," says Dionisio of AECOM. "The markets in most of the region are strong. For example, we just won a major light-rail program management contract in Qatar."

Paul Steelman, CEO of Paul Steelman Associates, says the most desirable international region for U.S. firms is Asia. This area is where the firm's market is going to be over the next two years, he notes, saying, "In 2011, I project that 88% of our gross revenues will originate from Asia."

The biggest targets for design firms are China and India. "The growth rates in India and China and the demand that they are creating is part of the upside of the international market," says Martin. The more that India and China grow and prosper, the more their firms lose their cost competitiveness, he says.

"China is a market that never slowed down," says

Roehling of SmithGroup. "We weren't the first design firm in, but we are pursuing projects selectively. SmithGroup now is working on a 428,000-sq-meter research and development center for Chinese automotive giant FAW in Changchun.

India also is a major target for design firms. "We are helping the Indian Dept. of Environment & Forests design an approach to remediation and hazardous-waste handling," says McGinty of Weston Solutions.

Innovation | By Gary J. Tulacz

Environ's VOC BioTreat

Groundwater and airborne volatile organic compound emissions are regulated by myriad rules from the U.S. Environmental Protection Agency. Industrial owners complying with EPA rules generally treat airborne emissions by using activated carbon filters and burning the residue. Waterborne emissions are frequently treated through biotreatment with organisms.

Why not consolidate the approach, says Carl Adams, global leader for industrial wastewater treatment at ENVIRON International. "Why have two processes to treat one problem?" he asks. ENVIRON launched its VOC BioTreat™ process in 2010, which pipes biodegradable airborne VOCs into the biotreatment plant treating waterborne VOCs.

"Clients have always had biotreatment plants to treat the water. You just let the bacteria eat the VOCs," says Adams. The new Environ process uses existing

bioplant equipment and avoids the additional costs of carbon incinerators and the filtration process. Further, there are minimal CO₂ emissions with the new proprietary process, Adams says.

EPA has approved Environ's VOC BioTreat as an alternative control device for VOCs, and the process has been installed successfully at the Marathon Oil refinery in Garyville, La. (above). The American Academy of Environmental Engineers awarded VOC BioTreat its Grand Prize for Research on March 3, 2011.

"Every major plant that has a bioplant can use this system," so VOC BioTreat is not expensive to design and install and the operating costs are minimal compared with the old system, says Tom Vetrano, SVP of Environ.

Since VOC emission control is an issue at most refinery, chemical and pharmaceutical plants and steel mills, this innovative process could be a real game-changer. ■

Weston is helping to plan sustainable cities in India that aim for zero-net energy and water use, she says.

One country that has gained a lot of attention recently is Vietnam. For example, Paul Steelman Associates is designing a new \$2-billion park in Vietnam called Happyland Theme Park as well as Happyland Central, an associated retail complex, about 20 miles from Ho Ch Minh City.

Perkins recently completed a master plan for the city of Hanoi. "You are seeing a lot of Japanese and Korean firms investing in Vietnam," he says. The country is becoming a major focus for development because it has a large, prosperous, literate population and a stable government, he says.

Some designers worry about the impact of future potential economic crises on the industry. "With all the talk about the deficit and inflation, the current situation is beginning to look a little like the recession of the 1970s," says Cryer of PageSoutherlandPage. "We went through a period of inflation and spiking oil prices that caused us all to struggle even after the recession ended. I hope we do not see that again."

As the market continues to struggle, design firms continue to fight to prosper. Firms are innovating, exploring new markets and expanding through acquisitions. The successful firms are not standing still. "If you continue to do traditional things in a traditional way, you will have a hard time growing in the market," Grumski of SAIC concludes. ■

Top 500 Up Close | By Debra K. Rubin

Water Firm OK With Midsize

Midsize design firms with revenue between \$100 million and \$250 million are often thought of as being the industry's most endangered species as well as its prime buyout targets. But Walnut Creek, Calif.-based water-waste-water firm Carollo Engineers Inc. thinks it will do just fine.

"We've stayed true to the goal of internal ownership, and we're not tempted by big-dollar numbers," says Gary Deis, CEO since 2002. Carollo has \$168.5 million in 2010 revenue and 650 employees. After market conditions forced the firm to re-examine its valuation, "our

internal stress about money went away," Deis says. Carollo will broaden its ownership—now at only 8% of staff—however, its board will remain in-house, Deis adds. Carollo's growth is flat but profitable, and backlog is up 20%.

"Water-related work is all we do, and we've worked hard to make technical innovation what distinguishes us," says Executive Vice President B. Narayanan, noting unique approaches at a Denver project (above). "We value this culture. It's a big part of what motivates us to stay independent and employee-owned." ■
