Firms See a Slow Recovery

Economic signs show a weak market rebound, but large design firms are skeptical that a major turnaround will come soon By Gary J. Tulacz

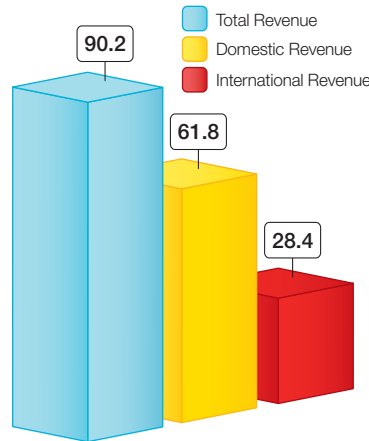

2012-2013 at a Glance

Comparing the Past Decade's Design Revenue

(in \$ billions) Source: McGraw-Hill Construction Research & Analytics / ENR.

Construction has been mired in a sluggish market for nearly five years, and large design firms have been struggling to adapt or face dire consequences. For the past two years, large design firms, as a group, have seen only modest gains. Now, many firms are seeing signs that a market turnaround is in the offing. But there is a lingering skepticism about whether 2013 will see a stronger market rebound or another year of waiting.

The signs of the recession's end can be seen in ENR's Top 500 Design Firms list. The Top 500, taken as a group, had overall design revenue of \$90.24 billion in 2012, up 6.1% from \$85.06 billion in 2011. This marks the second year the Top 500 experienced revenue growth since the recession began.

On the domestic side, the picture is not robust. The Top 500 did see a gain in revenue from projects in the U.S., but the gain was 5.5%, to \$61.86 billion, in 2012 from \$58.62 billion in 2011. This is still far from the record \$68.14 billion in domestic design revenue generated in 2008. The international market did a little better as more large firms are looking beyond U.S. borders for stronger markets. Revenue from projects outside the U.S. rose 7.3%, to \$28.38 billion, in 2012.

Like last year, traditionally private-sector markets fared better than those associated with the public sector. Domestic markets that are traditionally in the private sector or a mix of private and public work gen-

"Mergers and acquisitions are a key way that many firms in our space grow, including ourselves."

Bob Gomes, CEO, Stantec

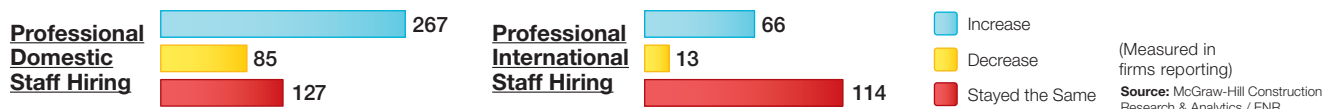

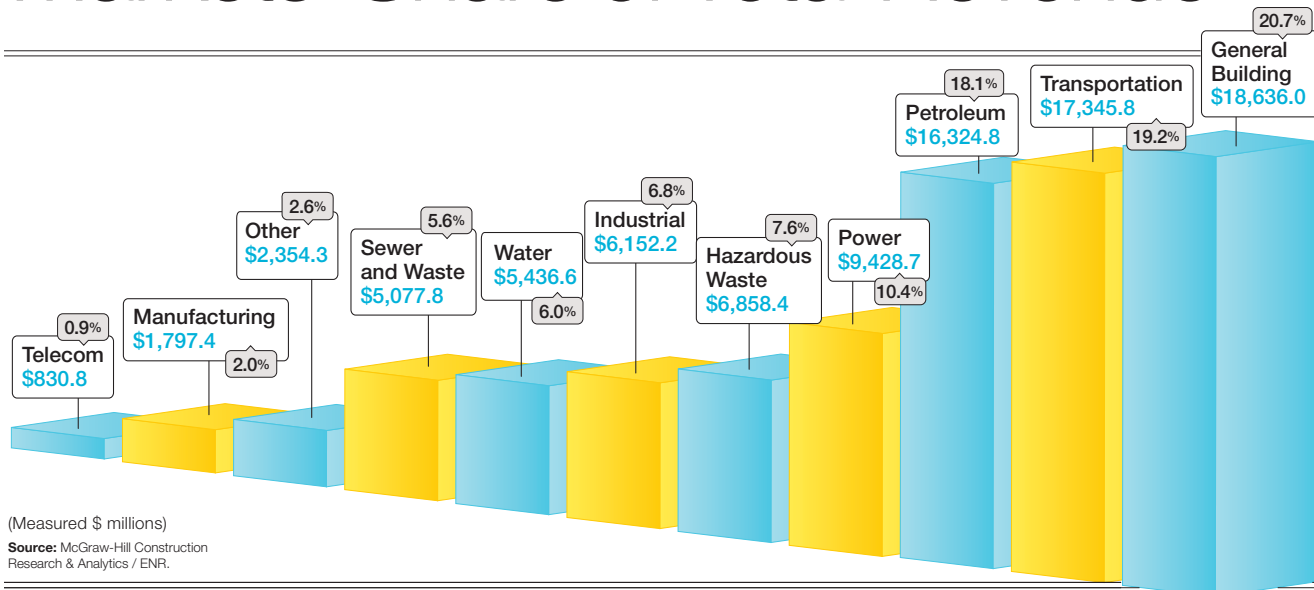

erally had significant gains. The biggest domestic market gainer was industrial process, which rose 27.4%, followed by the petroleum market, up 15.6%. Domestic power was up 11.9%, and the telecom market rose 10.3%. The U.S. building-design market continued to show some signs of growth, rising 3.7% in 2012 after growing 2.9% in 2011.

The largest domestic public infrastructure market was transportation, which rose 3.1%, to \$13.42 billion, in 2012. However, the domestic water market was down 0.1%, and sewer and wastewater fell 0.7%. These declines were on top of declines from 2011.

AECOM once again leads the Top 500. While it did not make any major domestic acquisitions during 2012, AECOM did announce in its 2012 annual report that it would continue to pursue growth both organically and through acquisition.

However, AECOM is still searching out additional capabilities. "We are seeing that clients in certain industries are looking to engineering companies to deliver a wide array of capabilities," says Michael Della Rocca, AECOM's chief executive for North American operations. He cites energy clients, whether they are in shale extraction or traditional markets, that are looking for integrated services providers to support and enable their infrastructure. "This will positively impact firms such as AECOM that are

Markets' Share of Total Revenue

aligned with clients seeking the full range of service offerings from one provider,” he notes.

Consolidation in the design industry continued in 2012, with seven firms from last year’s Top 500 being acquired. Australia’s Cardno acquired ATC Associates Inc., Lafayette, La., and Marshall Miller and Associates Inc., Morgantown, W.Va., in 2012. CHA also made two acquisitions: R.W. Armstrong & Associates Inc., Indianapolis, and, at the end of 2012, Coler & Colantonio, which remains on this year’s list.

Stantec has been one of the biggest acquirers on the Top 500 over the past few years. In 2012, it acquired Greenhorne & O’Mara, which ranked at No. 145 on the 2012 Top 500 list. “We definitely see the consolidation trend continuing. Mergers and acquisitions are a key way that many firms in our space grow, including ourselves,” says Bob Gomes, Stantec CEO. “Consolidation is largely driven by our client base. Clients want more from their service providers, so integrated, multidisciplinary solutions are becoming the norm.”

Some firms made more strategic acquisitions during 2012. For example, SSOE Group acquired Evergreen EDC, a Portland, Ore.-based international engineering firm. “SSOE’s resources and systems combined with Evergreen’s expertise in the semiconductor market will allow us to respond to new opportunities and respond to the needs of some challenging clients,”

Top 500 firms sent surveys in last year.

69.5%

Saw revenue increases between 2011 and 2012.

29.9%

Saw revenue declined between 2011 and 2012.

says Tony Damon, CEO of SSOE Group.

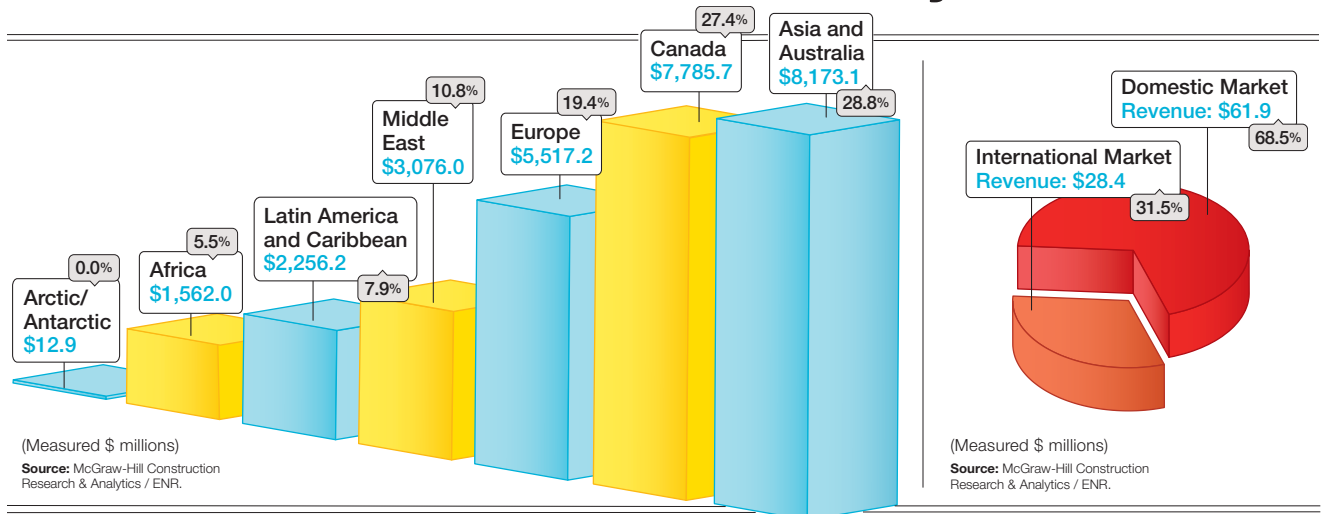

The continuing consolidation in the industry has smaller firms concerned. “This new trend of consolidated firms has forced us to collaborate and partner with firms that complement our services, allowing us to cover the full array of construction requirements and successfully compete with large megafirms,” says Al Pond, CEO of Pond & Associates. “But there will always be a place for smaller specialized firms that are the best at what they do.”

Not every large firm is in acquisition mode. “Our strategy is to develop new practice areas within our existing practice groups, and then—when they have a critical mass of the right leadership, right talent and good project portfolio—we spin them off as separate, stand-alone divisions,” says Greg Graves, CEO of Burns & McDonnell.

Poised for Recovery?

For large design firms, many markets seem poised to recover, but few firms believe there will be a quick turnaround. “Generally, across all markets, even as we’ve come out of the recession, everyone is still very much in a wait-and-see mode. When it comes to capital expenditures, our clients want to know they’re getting a slam dunk in terms of [return on investment],” says Rick Domyslawski, executive vice

International Market Analysis

president, engineering for Day & Zimmermann.

Some firms are worried that positive signs in the market may be overrated. "At midyear in 2012, everything was looking up," says Carl Roehling, CEO of SmithGroupJJR. "By the third quarter, federal work began to slow down, and we saw a dip in health care." As a result, his firm has gotten conservative in its projections for 2013, he says.

"We are optimistic about the continued economic recovery in the United States," says Stantec's Gomes, who believes the market already has hit bottom. But he is confident the U.S. will emerge again, "although I don't think we can expect the U.S. economy to quickly reach the same level it was once at."

Designers in most individual market sectors agree. "The transportation market looks to be up a bit, but I do not believe the market will spike," says George Pierson, CEO of Parsons Brinckerhoff. He says the water market is in a similar position, noting that it is "not as bad as the past couple of years, but more of a gradual recovery." As for the general building market, "we are seeing the first shoots coming up out of the ground, but it is not summer yet," Pierson says.

The New Normal

The buildings market has been sluggish since the downturn began in early 2008. While several sectors are beginning to pick up, some firms believe the recovery will be a slow process. "We no longer characterize the market as 'recessionary.' Rather, we see the current market as a new normal that will continue for several years to come," says Phil Harrison, CEO of Perkins+Will. "There is no simple response to this market. Firms just need to be as savvy as possible,

"The energy market is the single largest entity available for private investment, and [design] firms serving that market should do well in the long run."

Chris Vincze,
CEO,
TRC Cos. Inc.

learning at every opportunity and taking advantage of technology, among other tactics."

The health-care market has been one of the mainstays in an otherwise depressed general building market, but its star has been fading for the past couple of years. Many firms say health-care clients remain uncertain about the impact of federal health-care legislation on reimbursement rates, which has caused some projects to be delayed. "The whole idea of going into a new model of assessing reimbursements has the health-care industry putting plans on hold," says Roehling. He says he is not seeing many large acute-care hospitals getting the green light.

But Roehling says the increasingly digital nature of health-care evaluations and record keeping are providing new opportunities for renovation work in hospitals. "Many operating rooms are not equipped or even large enough to handle the technology and equipment for digital evaluation and diagnoses," he says.

"The change [in the buildings market] that is most concerning is the hesitancy of domestic health-care projects to move forward without a full understanding of health-care reform's impact," says Ralph Hawkins, chairman and CEO of HKS Inc. He says his firm's diversity has helped blunt the impact of a softening health-care market.

The K-12 education market has been stagnant for several years as local governments and school districts have struggled over declining taxpayer support. But in some regions, this may be changing. "We see substantial thawing in the educational construction market in 2013. Bond referendums for May 2013 indicate a surge in new work is on the way," says Christopher Huckabee, CEO of Huckabee. He says that, in 2012,

the firm saw a substantial growth in assessment and planning work. "Texas' demographic draw is putting pressure on school districts across the state that have tried to do more with less for several years," he says. This could result in many of the state's school districts playing catch-up for many years to come, yielding a very healthy construction market for years to come.

Energy To Burn

The unconventional U.S. gas-and-oil market has been providing expanded opportunities for design firms for several years now. "We have experienced substantial growth in our oil and gas pipeline business, even through the recent down cycle in the overall infrastructure sector," says Nicholas DeNichilo, CEO, Hatch Mott MacDonald. He says pipelines now account for almost 20% of HMM's revenue, and that percentage is still growing. "We continue to see great opportunities in this sector as oil and gas resources in North America are being further developed and transported to urban centers for consumption," says DeNichilo.

Some firms believe the current U.S. oil-and-gas market is a once-in-a-generation event. "No one segment is undergoing more dramatic change than the energy sector," says Graves of Burns & McDonnell. "The surge of natural-gas and petroleum production in North America may actually help us achieve a level of energy independence that we have not seen since the days of Rockefeller and Sinclair Oil."

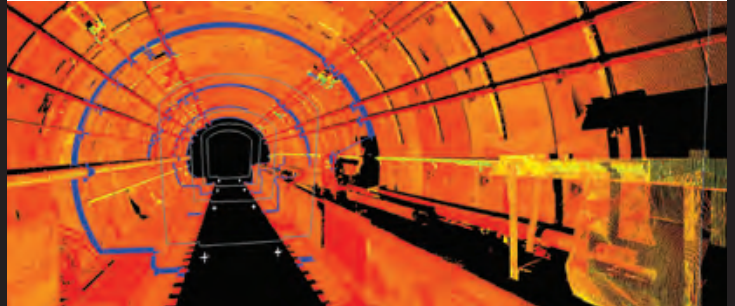

For some designers, this energy boom will help to turn around the market—and the economy. "Energy is the way out of this mess," says Chris Vincze, CEO of TRC Cos. "The energy market is inevitable and the single-largest entity available for private capital. So, any design firm working in that market will have a strong future."

The increase in the availability of oil and gas in the U.S. through the exploitation of shale-oil and gas deposits have many petroleum and industrial markets beginning to prosper. "We are seeing some general pickup across the board in nearly all of our industry sectors, like oil and gas, chemicals, compressed natural gas, wood products and the like," says Trott Hunt, president of Hunt, Guillot & Associates (HGA).

There also are major projects being announced or awarded in the industrial sector. For example, Airbus recently announced it will site a \$600-million Final Assembly Line facility in Mobile, Ala., says John H. Baker III, president of Thompson Engineering. He also notes increased capital investments by Austal USA, builders of the U.S. Navy's Littoral Combat Ship, along with steady growth in the oil-and-gas and chem-

Companies | By Debra K. Rubin

Maser's Focus Is Laser-Sharp

At **No. 214**, Maser Consulting P.A., Red Bank, N.J., is focusing on growth that includes embracing new technology not only to maintain a leadership role in land surveying, its biggest niche, but also to boost its edge in emerging telecommunications and transportation markets.

The firm oversees deployment of Amberg Technologies' trolley-based survey system to measure track alignment on New York City MTA's East Side Access rail-tunnel project (above). The system "vigilantly measures aboveground railway track movement to one-sixteenth of an inch," says Leo Ponzio, Maser chief administrative officer and survey services director. "Forty-eight inches between the upper crust of the tunnel and ground level lies a complex, existing rail system that supports hundreds of service trains daily. Even slight shifting of these rails could compromise the track and endanger commuters and underground work crews."

The firm is applying a similar focus to its bottom line, which, at \$49.1 million in revenue, propelled its rise on the Top 500 from No. 261 on last year's list. CEO Richard M. Maser expects revenue to grow to \$60 million this year, thanks to transportation capability acquired in 2012 and expansions in telecom and energy. Despite the firm's location in Superstorm Sandy's impact zone, Maser says hurricane restoration has not been a big revenue source. But the firm will redesign elements of New Jersey's largest brownfield redevelopment in Sayreville because of storm-generated flood-zone mapping changes.

Maser Consulting also is awaiting a finalized contract for an estimated \$600-million design-build flood-control project in Ghana, on which it is teamed with contractor Conti Group. The consultant will emphasize organic growth over acquisitions this year, with "a focus on strategic hires," Maser says. ■

ical-products industries throughout the Gulf Coast. "These all point toward continued opportunities," Baker says.

In the industrial and manufacturing markets, the client base has become increasingly international in composition as more foreign companies begin to see the U.S. as not just a major market for their products but also as a major location to site plants. "Over 70% of our current workload is from companies based or headquartered outside the United States," says Kevin Bean, CEO of O'Neal Inc. "The amount of foreign-owned companies looking to invest in the United States continues to be promising, albeit surprising."

But many industrial markets are sluggish. "The bio-pharmaceutical market remains somewhat stagnant," says Bean. He says the new Affordable Care Act

plan continues to have an impact on pharmaceutical, medical-device and biotech companies' desire to invest heavily in R&D-related projects. "Most of the projects we are seeing in this market appear to be [related to] maintenance of business or contract manufacturing."

An active industrial market does not mean companies are back to spending in a big way. "We're seeing, across the board, that our clients are really thinking much harder now about whether they want to build new projects or buy existing assets," says Domyslawski of Day & Zimmermann. "Ten years ago, some of our clients wouldn't have given this a thought. They would just build from the ground up. But now, even if they decide to build, there's a strong consideration given to buying existing assets to expand their operations."

The power market remains mired in uncertainty. "Right now, power is slow," says Pierson of Parsons Brinckerhoff. He says he expects this market to be in full recovery mode by the second half of 2014.

Much of the U.S. power industry is on hold pending clarification of U.S. regulatory policy and whether the plants will make financial sense. "There are a lot of coal plants on the sidelines because of emissions concerns and the low price of natural gas in the U.S.," says Dean Oskvig, CEO of Black & Veatch Energy. "However, it would not take too much of a gas price

"We're also seeing that clients in certain industries are looking to engineering companies to deliver a wide array of capabilities."

Michael Della Rocca, Chief Executive, AECOM, North America

rise to make these plants economically viable again."

Some designers see the nuclear market ready to stir again, despite the concerns resulting from Japan's Fukushima plant meltdown in 2011. "In the U.S. nuclear market, we continue to see the market strengthen based on additional post-Fukushima work that mandates modifications to existing nuclear reactors," says Simon Naylor, Americas group president at AMEC. He says the Nuclear Regulatory Commission's approval last year of two Southern Co. reactors and another pair planned for South Carolina have brought renewed excitement to the industry after a drought of more than 30 years. "However, there are still financial and regulatory hurdles that need to be overcome."

Naylor believes the clean-energy market in North America "while robust, still remains a mixed bag when it comes to funding" that is heavily dependent on tax incentives, public programs and investment tax credits.

Agencies in Maintenance Mode

Public infrastructure markets have been strained by declining tax revenues and stagnant usage-fee streams. Such factors led to a pullback in these markets. "MWH saw a downturn in the wet infrastructure sector three to four years ago, and the water-wastewater markets have remained relatively flat," says Alan Krause, CEO.

He believes the market will gradually improve.

However, Krause says many municipal agencies are looking increasingly at facility optimization rather than building new assets. “Clients are integrating sophisticated data modeling, visualization and predictive analytics to get a system-wide or top-to-bottom perspective on their operations [to] make smart decisions,” he says. This has put a new emphasis on data collection and analysis by engineering firms such as MWH.

There are several growing trends in the public infrastructure market that are having an impact on design firms. While funding shortfalls still exist among many public agencies, aging infrastructure is forcing many local agencies to act. “Heightened awareness about

aging infrastructure has resulted in local, grass-roots public-sector investment to rehabilitate or replace publicly owned utilities and facilities,” says Robert Goober, director of business development for Weston & Sampson. “We focus on cities and towns that can no longer put off repairs and improvements and are facing urgent needs to modernize their infrastructure, particularly their public buildings.”

Goober says Weston & Sampson has contracted 17 municipal-operations or public-transit facility projects in the past year, providing conditions assessment, space-needs programming, functional planning, industrial-equipment engineering and architectural-design services. He says inadequate public-works facilities and

equipment are a big drain on municipal budgets, yet upgrading these facilities are among the least expensive capital projects for public-works departments.

Municipalities and states are stepping it up. "We have seen a dramatic uptick in local and state projects as municipalities are leveraging state programs and, in some cases, bonding transportation funds," says Ruth Bonsignore, senior vice president and transportation market leader for VHB. She says state and local transportation needs are so intense that bold approaches are being taken to make investments, from gas-tax increases to public-private partnerships.

Transportation continues to be a concern. The passage of the Moving Ahead for Progress in the 21st Century (MAP-21) federal transportation funding bill has helped, but many firms say it is not enough. "MAP-21 authorization was helpful in the very immediate term, but a long-term solution to federal transportation funding is still critical," says John Carrato, president of Alfred Benesch & Co. "Some states are considering options such as gas taxes, sales taxes, registration fees and even tolling roads and bridges to generate enough money to fund their projects."

Public-Private Partnerships

There has been much buzz about public-private part-

"It would not take too much of a [natural] gas price rise to make these [idled coal-fired] plants economically viable again."

Dean Oskvig, CEO, Black & Veatch Energy

nerships (P3s), but the industry is still waiting for them to flourish. "The saying was, 'There are more P3 conferences than there are P3 projects,'" says Pierson. He says P3s have been slow to take off in the U.S., particularly on the transportation side, since state departments of transportation were designed to manage projects using design-bid-build.

"Another consideration is that P3 projects are politically risky," Pierson says. Until public agency officials can point to a P3 success to emulate, they will be wary about launching their own P3 projects.

"However, as more successful projects are completed, there will be a strong motivation for other agencies to try it," Pierson says. He points to major Parsons Brinckerhoff P3 projects such as the Port of Miami Tunnel (ENR 4/8 p. 32) and the Denver Eagle commuter-rail project (ENR 7/19/10 p. 68) as examples of P3 projects that are running smoothly.

Another trend in public infrastructure is the increasing use of alternative project delivery. "Ten years ago, project delivery was primarily design-bid-build. About five years ago, projects converted to construction management-at-risk [CMAR]. Now, we are seeing alternative delivery schemes that include CMAR as well as design-build-operate-maintain-own-finance," says Krause.

Design-build and construction management-at-risk “have become mainstream for infrastructure construction delivering faster results and better cost control to agencies,” says Frank O’Callaghan, VHB executive vice president. However, engineers have had to learn to operate in a higher-risk environment, he cautions. “Alternative delivery methods such as design-build or P3 and the requirement that engineering firms assume more risk are two changes that are here to stay,” adds AECOM’s Della Rocca.

For example, New York state, long a holdout against the use of design-build on public projects, is now embracing the process. “This year, authorization for the design-build delivery method is being expanded to include other New York state agencies involved in vertical-building projects,” says Donald A. Benvie, CEO of Tectonic Engineering & Surveying Consultants. The state passed enabling legislation last year authorizing the use of design-build for New York State Dept. of Transportation and New York State Thruway projects, in particular the Tappan Zee Bridge, he notes.

Public agencies also are becoming more tightfisted in administering contracts. “Under the strain of limited budgets, we see public agencies being more aggressive in demanding additional value for their capital programs, which has resulted in more resistance to change-order requests,” says Benvie.

On the environmental front, the market is split between the public and private sectors. “We are seeing a strong remediation business as many of our private-sector clients are being proactive,” says Vincze of TRC.

“O’Neal is committed to be ‘Paperless by 2018’ ... primarily to rethink how we effectively use the 3D-model technology.”

Kevin Bean, CEO, O’Neal Inc.

However, on the federal side, the market has stalled, he says. “That means some of the major players in the federal market are scrambling to find work in the commercial side of the environmental market, where we are strong, which could mean increased competition and squeezed margins,” he observes.

Several environmental firms agree the private market is strong. “Among our industrial-commercial clients, environmental compliance is now at the forefront of project planning whether the project involves a major capital expenditure, operational improvements or legacy environmental remediation liabilities,” says Naylor of AMEC

Competitive Edge

For many design firms, it is still a buyer’s market. “The competition for most projects is fierce since many firms are still struggling to rebuild their volume and backlog. Clients sense they have several good choices for their design team, and they use this to keep pressure on fees and contract terms,” says Bradford Perkins, CEO of Perkins Eastman.

However, many design firms say that, despite continuing pressure on prices, bids now are more realistic than in the past few years. “We still see significant competition for our projects, but the pricing gaps are now in line—as they should be—and the ‘wild’ bidders of the past few years are now selling cars,” says Huckabee. He says, generally, bidders are marking up their bids at a more traditional level, meaning the “deals” of the past few years are gone.

Further, more owners are beginning to see that the low bid is not always the best bid. “We find that most owners rely on trusted relationships with design firms and contractors of choice to deliver the project they need at a competitive price point,” says Baker of Thompson Engineering. “Most owners still realize that good design, which is different than low-priced design, yields better construction pricing, which is where most of the dollars are actually spent.”

Will Travel for Work

With the soft domestic market, the international scene remains a lure to major designers. “I see the U.S. market growing but slowly—certainly not by 10% or more

For expanded content on the ENR Top Lists, see enr.com/toplists.

per year,” says Pierson. “That is why we are actively seeking rapidly growing markets abroad.” For example, PB was named as project management consultant on the \$10-billion Roy Hill Holdings iron-ore pit-to-port project in Western Australia on March 7.

Almost all major design firms now believe some of the best clients, consultants and other resources are to be found overseas, says Perkins of Perkins Eastman. He says international practice—and the structural changes it requires—is an increasingly important factor in many firms’ strategic planning, causing many designers to reconsider the size and resources they need to have to support a worldwide practice. “Some of us believe that there will continue to be many merg-

ers and acquisitions as firms work to build the platforms they feel they need to have to be competitive globally in the future.”

One potentially huge international market is a direct reflection of the U.S. LNG boom: LNG terminals in Asia. “Natural gas is under \$5 per million BTUs. But in India, it is \$15 to \$16 per million BTUs,” says Oskvig of Black & Veatch. He says there are numerous planned LNG import terminals in India and Japan to accept U.S. LNG. “But much of this work will depend on U.S. policy concerning LNG export licenses and quotas,” he notes.

Brazil has proved to be an enticing but difficult market for international design firms. So, many firms have chosen to buy into that market through acquisition. “The market in Latin America is very strong and led to our joining forces with São Paulo-based Rocco, Vidal in June 2012,” says Harrison of Perkins+Will. He says Brazil has a very sophisticated design scene, but he expects only gradual growth because of extreme competition, deferred decision-making due to uncertainty and heightened expectations of quality.

Digital Dreams

Building information modeling (BIM) is affecting the way designers work and the type of people needed in the design industry. “Previously, the use of BIM was primarily driven by us to provide clients with the best services. Now, clients are aware of these capabilities and specifically request them,” says Klas Eklöf, senior associate at MBH Architects.

Technology also is causing a disconnect between those who have industry experience and those who have computer savvy. “The problem is that the people who can best drive the software don’t always know how to put a building together,” says Jim Draheim, president of Dewberry’s architectural practice. “Not many designers out there can do both.” This is why, despite the amount of attention given BIM, there is uneven adoption of it in the industry, he says. “As a profession, we’re still in between two worlds,” he observes.

The proliferation of digital technology is raising a whole new set of concerns. “All of our work is 3D model-based,” says Bean of O’Neal. “As this technology continues to proliferate and more of the owner’s manufacturing- and process-related information is attached to the model, protection of the owner’s intellectual property [IP] becomes a very big concern for E&C companies as well as the owner.”

Bean notes that many owners and unsophisticated general contractors do not understand that critical IP is contained in the various drawing packages located in online plan rooms. Intellectual property is further

SAIC Plans Split Into Two Firms

SAIC (No. 34) is a \$10.5-billion firm working in the national security and information-technology fields. It also does nearly \$750 million in construction contracting and engineering. This construction group may soon find itself with a new name—Leidos—as SAIC says it plans to split into two firms.

“We started out supporting both government and commercial customers, but the business models began to diverge,” says Joe Craver, president of SAIC’s health, energy and civil solutions group. The plan is for the technical services and enterprise information-technology business to continue under the SAIC name, while the \$7-billion national

security, health and engineering business will be named Leidos.

Scheduled to meet in June, the firm’s board of directors is expected to make the company’s new organization official. It may take until the end of the year to complete the separation, if approved.

Craver says the scope of the new Leidos will help the construction arm. He cites the firm’s work on the National Aeronautics and Space Administration’s Vibro-Acoustic Research Facility (above) near Cleveland. “We used our work with the federal government, systems design experience, engineering and design-build capabilities to deliver a great project,” he says. ■

compromised when firms use low-cost design centers. “Owners don’t initially realize their technologies and drawings are being outsourced to countries with little or no IP laws or protections,” says Bean. That is why O’Neal makes sure it has a clearly defined IP protection process, Bean says. “A formal IP protection plan, tailored specifically to a project, should be developed very early in the project planning phase.”

Finding the Future

If there is a strong underlying concern among many design firms, it is where the next generation of design professionals will come from. During the downturn, many design firms were not paying attention to the issue. Further, many people were lost to the design profession due to layoffs. As the construction industry

The Top 500 Dialogue

What are your strategies for succeeding in the current market?

CHRISTOPHER HUCKABEE, CEO
HUCKABEE
Fort Worth, Texas

We made a key decision in 2008, when our competitors began to diversify into other markets. We decided to double down [on core markets] and focus more resources on understanding our clients' issues.

What trends are affecting markets, the design profession or the industry?

TROTT HUNT, PRESIDENT
HUNT, GUILLOT & ASSOCIATES (HGA)
Ruston, La.

Clients are becoming more varied in their contracting strategies. Many are no longer able to take the traditional route of design, bid and construct because schedules are so compressed.

BRADFORD PERKINS, CEO
PERKINS EASTMAN
New York City

We have been able to stay competitive by offering specialized, client-focused predesign services that get us invited in as planners and advisers prior to the selection of a design team.

ROBERT GOOBER, DIRECTOR BIZ-DEV
WESTON & SAMPSON ENGINEERS
Peabody, Mass.

Municipal clients are continuing to focus on smart resource management. In the context of "nice to have" and "need to have," municipal clients continue to manage capital efficiently to ensure need-to-have issues are addressed.

SAMIR G. HANNA, CEO
SURVEYING AND MAPPING INC.
Austin, Texas

We recently established a wholly owned subsidiary, SAM-Construction Services Inc., to provide construction-phase services. We expect to develop more of those opportunities in the transportation market.

ALAN J. KRAUSE, CHAIRMAN, CEO
MWH GLOBAL
Broomfield, Colo.

We are seeing a shift from asset creation to asset optimization. This means there's less emphasis on building new water and wastewater infrastructure and more emphasis on making the most of existing assets.

AL POND, CEO
POND & CO.
Atlanta

Program managers, CMs and design-build firms are quickly becoming the client's agent to design and execute building. Pond [now] has design-build and construction management-at-risk services through an in-house subsidiary.

JOHN CARRATO, PRESIDENT
ALFRED BENESCH & CO.
Chicago

We're seeing the traditional definition of the "client" change as there is more design-build, P3 and other alternate delivery methods. Contractors, financiers and other entities, not typically considered our clients, now are.

J.J. ROOHMS, SENIOR VP
CP&Y INC.
Dallas

Sustainable design solutions are becoming big factors in how our projects are designed and constructed. Our latest focus is on low-impact development practices for our roadway projects [and] getting our staff certified.

JOHN H. BAKER III, PRESIDENT
THOMPSON ENGINEERING
Mobile, Ala.

The commoditization of engineering-design services is a threat to the industry. You would not hire a doctor or lawyer based solely on the lowest advertised fee. The same should be true for engineers responsible for public safety.

begins to recover, the worker shortages experienced during the boom years of the mid-2000s will escalate.

“The departure of the baby-boom generation is beginning to accelerate, which will create an ever-increasing vacuum for the talent needed to replace it,” says Damon of SSOE Group. “Since Gen X simply lacks numbers, coupled with the decline in enrollment in engineering, this means there will be accelerated career advancement opportunities for Gen Y to help fill the void in the very near future. Our challenge is, how do we develop them quickly enough to be ready?” he says.

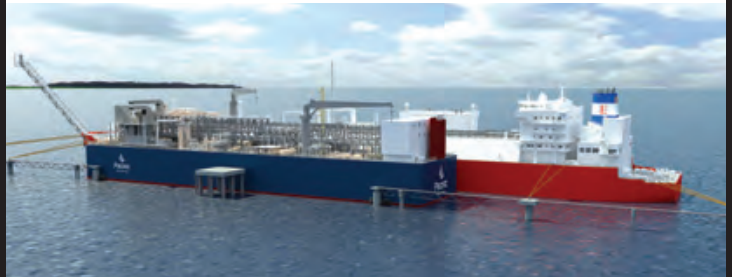

Attracting young people into the industry is another challenge. There are many design firms actively engaged in recruiting and retaining young engineers in the industry. One such initiative is Bucknell University’s Engineering Success Alliance (ESA) program, funded by industry firms such as Parsons Brinckerhoff and STV as well as Microsoft and Goldman Sachs. “We see great programs like the ACE Mentor Program that excite high school students, particularly from inner-city environments, about the engineering field,” says Pierson of PB. But keeping students in engineering programs can be a problem, he notes.

Pierson says many inner-city students suffer from culture shock when they attend an engineering school far from home. “ESA attempts to provide these [students] with a support system to keep them on the engineering track,” he says. The program has three aims: to provide academic and mentoring support, to establish peer groups for mutual encouragement, and to give students networking opportunities to find jobs after graduation, Pierson says.

Pierson says, over the past three years, the program has reduced defections from the engineering program by about 75%. “This program was not designed to promote Parson Brinckerhoff. It is an investment in our company’s future and our industry’s future,” he says. ■

Oil & Gas | By Gary J. Tulacz

Floating LNG Plants Coming

Natural-gas liquefaction and gasification plants are huge, expensive and, up until now, land-based. However, in July 2012, Black & Veatch (**No. 14**) and Shanghai-based shipbuilder and engineering firm Wison Offshore & Marine Ltd. won a contract to design and construct the world’s first floating LNG (FLNG) liquefaction, regasification and storage unit.

The ship is being constructed in Nantong, China, and will be floated to the Pacific Coast of Colombia, where it will process gas from the La Creciente gas field, located in the Lower Magdalena Valley Basin. The gas field is owned by Colombia’s Pacific Rubiales Energy Corp. The ship will be owned and operated by Dutch-based oil-and-gas shipping company EXMAR. The EXMAR EXPORT (rendered above), as the ship will be named, is scheduled to start production by the end of 2014.

“We were chosen because of our long history of designing LNG facilities,” says Dean Oskvig, president and CEO of Black & Veatch’s energy division. He notes that B&V is using its patented PRICO LNG technology, which he says is

particularly adaptable to small and medium-sized LNG plants. Wison will be designing the ship, while B&V will be designing the upper LNG processing part of the ship. Oskvig believes this project will be the first of several such floating LNG plants the company designs.

There are several advantages to floating LNG production facilities. There is no land footprint, and they make less of an environmental impact. Further, technology now allows for safe ship-to-ship offloading of LNG, eliminating the need for land-based export terminals and pipelines. Finally, the FLNG plants can be floated to remote parts of the ocean to make available otherwise inaccessible gas fields.

There are other proposed FLNG ships in the works, including Royal Dutch Shell’s Prelude FLNG, which began construction last October. France’s Technip and Korea’s Samsung Heavy Industries are working on that ship, which will anchor off Australia’s northwest coast. On April 2, ExxonMobil and BHP Billiton of Australia submitted plans to Australia’s Environmental Dept. to build another large FLNG. ■
