

Mercy Willard Hospital

Critical Access Hospital

Plans to replace this aging hospital began with SSOE's design of a new healthcare campus on a nearby 38-acre greenfield site.

The campus master plan accommodates the new hospital, skilled nursing facility, and a full range of support services, including Life Flight. SSOE incorporated a full-service, 24-hour emergency department; a medical / surgical ICU; inpatient and outpatient surgery; rehabilitation services; pastoral social services; and all of the necessary laboratory, diagnostic, and dietary services customary for a free-standing critical access hospital. All patient rooms and an enhanced patient experience were major criteria in the design of this facility.

The design of both the facility's exterior and interior satisfies all of the strategic goals outlined by the client, which include a new hospital identity, a vision of strengthening the community, design accommodations for the future, and the creation of a comprehensive healthcare campus.

value promise

With careful planning and design, SSOE was able to reduce the building footprint by 20%, saving the Owner approximately \$3 million.
