ProMedica Wildwood
Orthopedic Hospital - Atrium

Overview / Capabilities

At SSOE, our interior designers incorporate unique skills in the creation of innovative, state-of-the-art environments with lasting appeal. The functionality of spaces, the needs of the users, and the goals of the project are surveyed then evaluated fully by our interior designers. A creative usage of materials and features make spaces a successful reality. Our goal is to provide a seamless solution between the interior and its exterior.

We believe every facility should not only reflect the owner's wishes, but also establish cutting edge, high-end results. Our interior designers provide professional services in all phases of the project from programming through construction to occupancy. We use budget conscious decision making—reflecting both passion for space creation, and awareness of owner's needs. It is our designer's listening skills and attention to detail which distinguishes SSOE from other design firms.

“SSOE’s interior design team listened to our concerns and guided the design process to create this state-of-the-art facility that provides family-centered care and promotes community involvement. The warm and inviting environment captured the spirit of the community and exceeded our expectations.

They managed to successfully blend the perspectives of users, contractors, and design personnel into an integrated facility plan that was functional, attractive, and cost efficient.”

Dale E. Thornton
