SSOE understands the issues facing municipal power companies. We have the range of disciplines and depth of utility experience in-house needed for all types of generation, transmission, and distribution projects. By applying our experience in renewable energy facilities, including wind, solar, biomass, biogas, landfill gas, and waste burning, our team can help you reach your sustainability goals and meet governmental requirements for pollution control. Our dedicated team will not only assure the continuity and efficiency of our performance, but make sure your projects align with your unique goals.

PROJECT TYPES

- Air pollution control systems
- Arc flash mitigation
- Asset hardening
- Balance of Plant (BOP) design
- Combined heat and power
- Commissioning and start-up
- Distributed generation cost of service studies
- Electrical generation
- New boiler installation
- Plant upgrade analysis
- Process automation, PLC, and HMI programming
- Process instrumentation and controls
- Renewable energy
- Substation design
- Systems integration, control system, and SCADA upgrades
- Transmission and distribution
