- Westminster Assisted Living

SSOE's healthcare team fully understands the latest "person-centered care" design principles that empower seniors to make choices and express their personal preferences. Person-centered care, or culture, is the philosophy behind providing skilled nursing in a home-like environment, rather than a clinical setting. This offers the residents the care, planning, and decision-making process that promotes choices, purpose, and involvement in their own daily activities.

Keeping person-centered care at the forefront, our designs enable our clients and their residents to age in a unique, integrated community. We design with technology, sustainability, and hospitality needs in mind and work with clients to create flexible facilities for future expansions and modifications. SSOE's national footprint allows us to be a trusted partner at locations throughout the country while providing the immediate attention of a local firm with the ability to provide all required design services in-house.
